Seeking Software Engineering Internship, Summer 2027 — Backend & AI/ML

EDUCATION

Colorado School of Mines | Bachelor of Science in Computer Science, *Expected December 2027*

GPA: 3.87/4.00 · Dean's List (all 4 semesters)

Coursework: Data Structures & Algorithms, Computer Organization, Software Engineering, Advanced Software Engineering, Systems Programming, Linear Algebra; *In Progress*: Data Science, Programming Languages

PROFESSIONAL EXPERIENCE

Qualcomm (via Mines Field Session) | *AI Engineering Consultant* | *May 2026 — June 2026*

- Engineered a Retrieval-Augmented Generation (RAG) pipeline for an analytics chatbot using Python, LangChain, and Qdrant; optimized chunking to increase average retrieval relevance from 0.74 to 0.86.
- Partnered with a cross-functional team to integrate the RAG pipeline with Model Context Protocol (MCP) servers and containerized tools, ensuring reliable data ingestion and chatbot functionality.
- Presented RAG architecture and evaluation results to Qualcomm stakeholders; incorporated feedback to refine retrieval, improve factual accuracy, and reduce hallucination risk in chatbot responses.

Immersive Solutions | *Front-End Website Developer* | *June 2025 — August 2025*

- Developed a responsive website from the design team's UI/UX mock-ups using HTML, CSS, and JavaScript, ensuring consistent layouts and functionality across desktop and mobile devices.
- Created reusable HTML/CSS components that the team could import into Microsoft Power Pages and customize, including colors, text, and other styling elements, without editing the underlying code.

TECHNICAL PROJECTS

Medieval Clue | *Java, JUnit, Git, Swing*

- Co-developed a custom digital Clue game in Java; modeled the game board as a graph using adjacency lists; implemented recursive DFS with backtracking and a HashSet to compute valid movement targets.
- Collaborated via Git and wrote JUnit tests to validate movement logic and game-state rules.
- Built a Swing GUI and implemented turn handling, accusations, and suggestion logic for computer players.

Automated CSV Data Extractor | *Python, Linux*

- Automated CSV extraction and filtering with Python in Linux, replacing a manual email-processing workflow and saving a stakeholder 8+ hours annually while improving consistency for recurring data retrieval.

Superior Flat | *Java, Fabric, Gradle*

- Shipped a Fabric mod in Java that adds 6 custom Superflat world presets across the Overworld, Nether, and End, reaching 2,000+ downloads on CurseForge while maintaining releases for Minecraft 1.19.1–1.21.
- Implemented 8 custom chunk generators by extending Minecraft's NoiseChunkGenerator via the Fabric API.

SKILLS

- Languages:** Python, Java, C++, C, Bash, HTML, CSS, JavaScript
- AI/ML:** LangChain, Qdrant, Hugging Face Sentence Transformers, Scikit-learn, Pandas, NumPy
- Concepts:** RAG, Semantic Search, Text Embeddings, Classification, MCP
- Development Tools & Tech:** Git, Linux/Unix (3+ years daily driver), Docker
- Soft Skills:** Communication, Teamwork, Creativity, Problem-Solving, Adaptability
